CV 1- FUNCTION: THIS PROTEIN IS A PROTEIN TYROSINE KINASE TRANSMEMBRANE
CV RECEPTOR FOR ANGIOPROTEIN 1. IT MAY CONSTITUTE THE EARLIEST
CV MAMMALIAN ENDOTHELIAL CELL LINEAGE MARKER. PROBABLY REGULATES THE
CV ENDOTHELIAL CELL PROLIFERATION, DIFFERENTIATION AND GIVES THE
CV PROPER PATTERNING OF ENDOTHELIAL CELLS DURING BLOOD VESSEL
CV FORMATION.
CV 1- CATALYTIC ACTIVITY: ATP + A PROTEIN TYROSINE ADP + PROTEIN
CV TYROSINE PHOSPHATE.
CV 1- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
CV 1- TISSUE SPECIFICITY: HIGHLY EXPRESSED IN DEVELOPING VASCULAR
CV ENDOTHELIAL CELLS.
CV 1- SIMILARITY: TO OTHER PROTEIN TYROSINE KINASES IN THE CATALYTIC
CV DOMAIN.
CV 1- SIMILARITY: CONTAINS 2 IMMUNOGLOBULIN LIKE C2-TYPE DOMAINS.
CV 1- SIMILARITY: CONTAINS 3 CYPHERETIN TYPE III LIKE DOMAINS.
CV 1- SIMILARITY: CONTAINS 4 EGF-LIKE DOMAINS.

 XX
 XX New tek polypeptide is characterized having a fragment of the tek
 PE extracellular domain, useful for treating mammals with a disease
 PE mediated by angiogenesis, e.g. tumors, ocular neovascularization or
 PE inflammatory diseases.
 XX
 XX Claim 17, Page 47-49, 43pp; English.
 PS The present sequence represents a fusion protein comprising the
 CC extracellular domain of the human receptor tyrosine kinase tek and the
 CC PE portion of human immunoglobulin (Ig) G1. The tek fragment lacks all
 CC or part of the region containing fibronectin type III (FNIII) motifs, and
 CC retains the ability to bind at least one tek ligand. The fusion
 CC polypeptide is an angiogenesis inhibitor, and a tek antagonist.
 CC useful for treating a mammal having a disease or condition mediated by
 CC angiogenesis, e.g. a solid tumor, a condition of disease characterized by
 CC ocular neovascularization. In particular, the tek antagonists are useful
 CC for treating or preventing inflammatory diseases (e.g. arthritis,
 CC rheumatism or psoriasis), certain eye disorders (e.g. diabetic
 CC retinopathy, retinopathy of prematurity, neovascular glaucoma,
 CC retinoblastoma, retrolental fibroplasia, rubeosis), uveitis, macular
 CC degeneration or graft neovascularization), cancer (e.g. metastatic
 CC sarcomas or carcinomas), or wound granulation.

CC which bind to mAb, the presentation of the epitopes can also stimulate
CC helper cell and/or cytotoxic T cell responses. The immune response is
CC directed against endothelial cells in the tumor associated to the
CC vasculature and includes production of antibodies that bind to the
CC cells, causing coagulation and thrombosis. The immune response is
CC targeted to endothelial cells lining blood vessels of the tumor (these
CC cells over-express bcl-2), so damage to even a few cells will kill many
CC tumor cells. These target cells are accessible to the immune response
CC and problems of antigenic heterogeneity, MHC loss and resistance to
CC apoptosis (associated with epithelial cells) are unlikely to occur in
CC normal endothelial cells. TEK epitopes (see AAY6320-24) are used to
CC generate anti-bodies, and for prevention and treatment of cancer.
CC the peptides, and recombinant DNA constructs or viral vectors that
CC express them, are useful as anticancer vaccines to target endothelial
CC cells that line blood vessels at the tumor.

XX New isolated gene, NPC1 is associated with Niemann Pick type C

P1 disease, used to develop products for the study, diagnosis and

XX therapy of the disease

XX disclosure; Page 91-95; 10pp; English.

XX this polypeptide comprises the Caenorhabditis elegans orthologue
CC of the human NPC1 polypeptide that is associated with
CC Niemann Pick disease type 2 (NP2). The polypeptide shows
CC extensive identity (90%) and similarity (58%) to the human
CC NPC1 protein (see AAW88445). Biochemical and genetic analysis of
CC yeast, worm and murine NPC1 model systems will provide resources
CC for understanding the role of NPC1 in intracellular cholesterol
CC homeostasis and in the etiology of neurodegeneration in NPC.

CC discovery. The provision of the human NPC1 gene sequence (see
CC AAW88476) enables methods of detecting the presence of mutations in
CC the NPC1 gene, and thereby facilitates the determination of
CC whether an individual is an NP-C sufferer or carrier.

P1 neurite outgrowth or treating nervous system disease, tumours, etc.

XX Claim 9; Page 42; 42pp; English.

XX The peptides AAW83760-80 are examples of peptides that bind to the
CC neurotrophin receptor under physiological conditions in vivo or in
CC vitro. The peptides are structural analogs of nerve growth factor (NGF)
CC and contain at least one beta turn (from residue 28 to 43, 49 or 91-98)
CC or 3 consecutive reverse turns (from residue 56 to 65). The peptides may be
CC cyclized by deletion of 2-8 of other residues and may be
CC linked to a tracer e.g. a metal chelate or radiolabel. The peptides
CC may contain uncharged or hydrophobic amino acids at the N and
CC C-termini, which are optionally protected by an fluorenyl protecting
CC group. The peptides are useful for inhibition of neurotrophin recep-
CC tors inhibiting neurite outgrowth, treating central or peripheral nervous
CC system disease, tumours and neuromas, for mapping hormone receptor
CC interaction sites and receptor domain-function correlation and for
CC immunisation. This peptide is derived from residues 28, 49 and 98
CC linear.
